

HOW TO ASSEMBLE

A - Straighten the handle.
B - Align both holes by rotating the board cam.

Insert flathead screw from the bottom of board cam.

Use supplied hex key to securely tighten the screw.

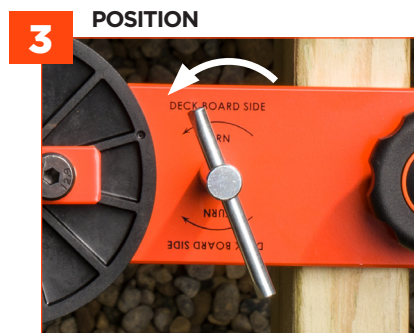

LOCK-IN GROOVED BOARDS & CLIPS

A - Loosen joist knob until the stop block disengages.
 B - Rotate block so the word on the side facing the joist cam matches the joist material.

Adjust the stop block to the proper joist width and tighten the knob.

Place LEVER on the joist and tighten the joist cam with the Pivot Pin.

Apply pressure by moving the handle towards the deck board. **Do not over-tighten** as the boards can buckle.

Leave LEVER in place until all clips are fastened.

Release pressure by moving the handle away from the deck board.

Loosen the joist cam and remove LEVER.

STRAIGHTEN WARPED BOARDS

A - Loosen joist knob until the stop block disengages.
 B - Rotate block so the word on the side facing the joist cam matches the joist material.

Adjust the stop block to the proper joist width and tighten the knob.

Place LEVER on the joist and tighten the joist cam with the Pivot Pin.

Apply pressure by moving the handle towards the deck board.

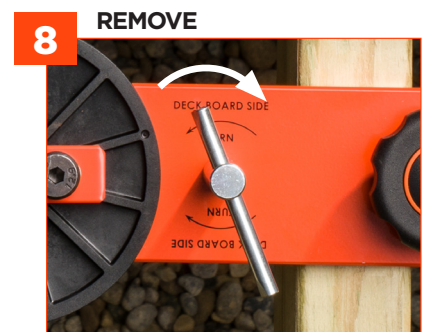

Keep turning until the board is in desired fastening position.

Leave LEVER in place until all fastening is complete.

Release pressure by moving the handle away from the deck board.

Loosen the joist cam and remove LEVER.
